Louis Dalligos

Full-Stack | AI Engineering

louisdalligos@outlook.com | Quezon City, Philippines
https://louisdalligos.github.io/

Professional Summary

Full-stack software engineer with over seven years of experience building web applications, APIs, and internal tools. At DTN, built a developer portal and API usage dashboards, integrated user-management APIs, and contributed to improvements in an AWS data pipeline. Now building AI applications with LLM APIs, retrieval-augmented generation (RAG), tool calling, and custom MCP servers. Main technologies include TypeScript, React, Next.js, Node.js, PostgreSQL, and AWS.

Professional Experience

Full-Stack Developer (Contract), Independent Software Consultant / Freelance 02/2026 - 05/2026
Remote

- Designed and delivered a production-grade multi-broker trading SaaS platform with real-time market data, automated trade replication, analytics, and AI-powered insights.
- Architected scalable real-time communication services, integrating multiple broker APIs and optimizing system reliability, performance, and maintainability.
- Built secure backend services with multi-tenant data isolation, encrypted credential management, authentication, and compliance-focused workflows.
- Developed an automated copy trading engine with low-latency order replication, fault tolerance, and resilient retry mechanisms.
- Created high-performance analytics and reporting features, processing large trade datasets to deliver actionable performance insights and interactive dashboards.
- Integrated subscription billing, monitoring, logging, and operational tooling to support a production SaaS environment.
- Implemented AI-powered trade analysis and knowledge-based assistance using large language models to enhance user insights and reduce support overhead.

Software Engineer II, *DTN Philippines Inc.* 12/2020 - 02/2026
BGC, Taguig

- Integrated backend user-management APIs exposed through an API gateway with a Next.js/React frontend using TanStack Query and Axios, supporting Auth0 authentication and role-based access control.
- Planned and built DTN's Developer Portal and API catalog for weather, shipping, and financial data. Implemented rate-limited trial tokens and production credentials tied to customer subscriptions.
- Built reusable design-system components, including custom date and time pickers, used across internal applications by 10-50 developers.
- Enhanced and maintained dashboards showing API request volume, response times, error rates, and usage trends. Customers used them to track plan limits, while internal teams monitored API performance.
- Contributed to an AWS data pipeline redesign after high-volume log ingestion caused PostgreSQL performance issues. Helped move logs to a partitioned Parquet data lake on S3 and introduce SQS to separate ingestion from query processing, improving dashboard load times during peak traffic.
- Wrote technical documentation, architecture diagrams, API integration guides, and onboarding materials for the new Philippines engineering office and its global partner teams.
- Reviewed code and helped establish JavaScript and TypeScript coding standards for the Philippines team.

Frontend Developer, *NuWorks Interactive Labs Inc.* 09/2019 - 10/2020
Ortigas, Pasig City

- Built responsive landing pages and marketing microsites for enterprise clients, translating UI/UX designs into websites that worked consistently across browsers.
- Worked with designers, backend engineers, QA specialists, and project managers to deliver projects within Agile teams.

Software Engineer (Frontend), *Sprout Solutions Philippines, Inc.* 07/2018 - 08/2019
BGC, Taguig

- Built reusable, accessible React components for an HR and payroll platform.
- Integrated REST APIs for salary calculations, tax deductions, payslips, and employee records.
- Improved client-side data fetching and built responsive layouts with Bootstrap and Material UI.

Education

Bachelor of Science in Computer Science, *Holy Angel University*

Core Skills

AI applications
Claude API, LLM APIs, LangChain, RAG, embeddings, vector search, agentic workflows, tool calling, prompt engineering, structured outputs

AI tooling & deployment
Custom MCP servers, Hugging Face models, LLM evaluation and observability, Docker, AWS, CI/CD; Claude Code, Cursor

Backend & integrations
Node.js, Python, REST APIs, WebSockets, Server-Sent Events, Next.js API Routes; Shopify, Zendesk, Stripe

Frontend
TypeScript, JavaScript, React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query, Axios, Redux, Recoil

Identity & security
Auth0, OAuth 2.0, RBAC, JWT, MFA, AES-256-CBC encryption, GDPR compliance

Data & caching
PostgreSQL, MySQL, Redis Pub/Sub (Upstash), Supabase (RLS, Auth, Storage), Prisma

Cloud & delivery
AWS (S3, SQS, EC2, Lambda), Docker, Kubernetes, Vercel, Railway, GitHub Actions, GitLab CI/CD, Datadog, Sentry

Testing & teamwork
Jest, Vitest, Cypress, Playwright, Git, Agile/Scrum
